Nisient

Tech innovation with a conscience.

nisient.com

Data transmission takes a quantum leap forward.

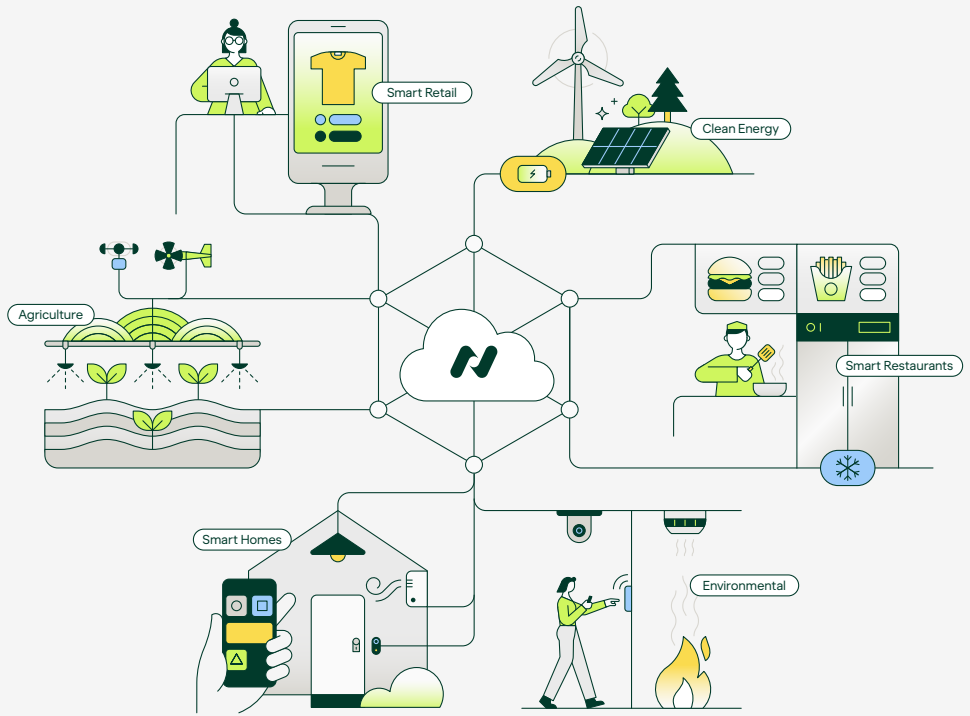

We believe our business can be the catalyst for positive social transformation, so our Mission is to pioneer new technologies that have genuine impact for the businesses that use them, and subsequently, the planet at large.

As knowledge based innovators, our name, Nisient, is inspired by the 17th century term 'omniscient', meaning 'all knowing'. True to this legacy, we challenge conventions and set new benchmarks in data network transmission, empowering our clients with scalable, cost effective solutions that streamline asset management.

Our flagship solution, IoTransit, currently optimises digital signage management for global B2B clients and monitors commercial appliances, detects faults and tracks power consumption, offering a seamless blend of operational efficiency and environmental responsibility.

We're also breaking new ground in the quantum security space to help transform cyber security for business communications and home automation. Given our solution is already being used for the secure and reliable transfer of data on a global scale, the introduction of quantum safe encryption to further enhance its core offering is a natural progression.

Real-time metrics for real-world applications

In the future, we envision this evolution will help foster smarter, greener living. By integrating solar energy with next generation batteries, we aspire to help homes and businesses achieve energy independence, relying on the grid only as backup. Key to our broader goal to pioneer technologies that contribute to a more sustainable future for all.

To find out more about how you and your clients can benefit from this groundbreaking technology, get in touch with Nisient at:
